

ARCHI-TECHNOLOGY, LLC

Communications, Life Safety and Automation Consultants

Planning and Consulting

Archi-Technology planning and consulting services help your organization to effectively organize and integrate communications systems, departments and individuals into the strategic planning process for your buildings.

Planning Services. Your CLA technology infrastructure is a critical and valuable asset in your facility. Archi-Technology will meet with the appropriate representatives of your organization to gather pertinent information needed to plan for your CLA technology objectives. We provide an organized and strategic plan for deployment of future CLA needs that will save valuable time, space and money when the time comes for enhancements and additions to your current CLA systems and infrastructure.

CLA Technology Plan

Strategic analysis of your existing CLA technology infrastructure and systems allows you to evaluate your current CLA technology status and effectively plan your future CLA technology needs from a strategic and project based standpoint. Included in the Technology Plan are:

- An Executive Summary that provides an overview of the present CLA technology, as well as recommendations for present and future upgrades
- A Requirements section that details CLA technology requirements based on interviews with stakeholders and evaluation of your current infrastructure;
- A CLA Technology Plan section containing recommendations for upgrades.

Technology Assessment

Your building's technology infrastructure has become as important as power, elevators, security and HVAC. Having an accurate assessment of your existing technology infrastructure is critical to planning for future bandwidth requirements demanded by your tenants.

Our building assessments provide commercial building owners and managers with an effective tool to help in the

preparation of the building's marketing plan by identifying the "smart building" technology requirements needed to retain and attract tenants.

CLA Master Planning

Using the newly published CSI MasterFormat sections as a tool in the CLA master planning process, we ensure that CLA Technology will be adequately addressed in the Master Planning of your facilities' future needs

The installation and integration of technology systems in smart buildings need to be planned for in advance to ensure that your facilities can keep pace with the ever changing CLA requirements of tenants.

Training

We provide effective training and educational services to ensure that staff members new to the design and construction of buildings are able to effectively and efficiently take part in the process.

Additionally, our educational services provide your planning and construction management staff with up to date knowledge and information related to the changes in the construction industry.
